

Upgrade instructions for the new Snapshot (April 2017)

1. Exit your existing Snapshot;
2. Download the new version:
<http://www.plussoftsolutions.com/downloads/snapshot/snapshot-setup.exe>
3. Click the Snapshot-Setup to install, following the installation prompts. This will overwrite your existing version;
4. Open your **new** version of Snapshot;
5. Enter your Username and Password (this is the same as before);
6. A pop up will ask you to update the database, click "Yes" & log in;

And you're ready to use the new Snapshot! Hooray! Avocado on toast!

Other upgrade points:

- As soon as one workstation has been upgraded, each additional workstation needs to be upgraded immediately. Likewise with Server installs.
- If using the Web Dashboard version of Snapshot, you will need to upgrade this as well.
Download from: http://www.plussoftsolutions.com/downloads/snapshot/snapshot_web-setup.exe

Note: The new version(s) will not be live at this time. Don't jump to the site and download and upgrade yet! Keep an eye on the download page.
